

### **Model 2047E Twin Engine, Single Lever Control**

Twin engine, single station, single lever per engine control with toggle switches. This control has all the basic features of the standard 2047 control with the added feature of the toggle switches. Shown are 2 toggle switches per control lever knob. It may also be ordered with none to 2 switches per knob or any combination. The toggle switches may be used to control the trim and tilt on outboards or sterndrives or any other function you want to control.

This unit is constructed entirely of silicon bronze and stainless steel except for the toggle switches and neutral safety switches. Throttle override is possible by pulling out the handle which bypasses the clutch. It has 3" (76mm) maximum clutch travel and 2 3/8" (60mm) maximum throttle travel. A throttle extension kit is also available. Neutral safety switches are also available. (Two neutral safety switches are shown installed).
